Ma Faranda endução em j (numero de termos):
BASE:
$$f[Xo] = f(Xo) = \frac{1}{0!h^o} \Delta f(Xo)$$
 vale

INDUSÃO: A formula race para j-1 turnos:

$$f[x_0, ..., x_{j-1}] = \frac{1}{(j-1)! h_{j-1}} \Delta^{j-1} f(x_0)$$

Agora, demonstrandes que vous para j termos:

$$f[x_0,...,x_j] = \frac{f[x_1,...,x_j] - f[x_0,...,x_j-i]}{x_j - x_0}$$
 (pula definição)

$$= \frac{1}{(j-1)!h^{j-1}} \Delta^{j-1} f(x_1) - \frac{1}{(j-1)!h^{j-1}} \Delta^{j-1} f(x_0) \quad (pula Hi)$$

$$=\frac{(j+1)|h^{j-1}|}{\left(\nabla_{j-1}t(x')-\nabla_{j-1}t(xo)\right)}=\frac{j|h^{j}|}{\left(\nabla_{j-1}t(x^{j})-\nabla_{j-1}t(xo)\right)}$$

$$=\frac{1}{\left(\sum_{j=1}^{j-1}t(x')-\sum_{j=1}^{j-1}t(xo)\right)}=\frac{1}{\left(\sum_{j=1}^{j-1}t(x^{j})-\sum_{j=1}^{j-1}t(xo)\right)}$$
(pais $x^{j}=x^{j}+x^$

$$P_{n}(x) = \sum_{j=0}^{n} \left(f(x_{0,n}, x_{j}) \prod_{i=0}^{j-1} (x_{i} - x_{i}) \right)$$

Come Xi= xo+ih

$$P_{n}(x) = \sum_{j=0}^{\infty} \left(f[x_{0}, \dots, x_{j}] \prod_{i=0}^{j-1} (x - x_{0} + ih) \right)$$

to item @,

$$P_{v}(x) = \sum_{j=0}^{j=0} \left(\frac{j! \, h_{j}}{2! \, f(x_{0})} \prod_{j=1}^{j=0} (x-x_{0}-ih) \right) = \sum_{j=0}^{j=0} \left(\frac{j! \, f(x_{0})}{2! \, f(x_{0})} \prod_{j=1}^{j=0} (s-i) \right) = \sum_{j=0}^{\infty} \left(\frac{j}{2} \right) \nabla_{j} f(x_{0})$$
